

Dr. Chapman is a Professor of Medicine, Renal Division, Assistant Director of the Renal Fellowship Training Program, and Co-Principal Investigator of the Atlanta Clinical and Translational Science Institute. Dr. Chapman is a graduate of the University of Guelph and MacMaster School of Medicine. She trained in Internal Medicine at Georgetown University School of Medicine and completed her Fellowship in Renal Medicine at the University of Colorado School of Medicine. She joined the University of Colorado faculty as Assistant Professor in 1988 and was promoted to Associate Professor in 1997. She joined the Emory faculty in 1998 and was promoted to Professor of Medicine in 2002. Dr. Chapman accepted the position of site-specific Program Director of the Grady General Clinical Research Center in 2005 and the overall Program Director of the Emory General Clinical Research Center in 2006. Dr. Chapman is Co-Principal Investigator of the NCRR supported Atlanta Clinical and Translational Science Institute. Dr. Chapman has served on the study sections for NIH, AHA and NKF and editorial boards for JASN, Kidney International, CJASN, AJKD and NDT. Dr. Chapman's research focuses on mechanisms of cyst formation in autosomal dominant polycystic kidney disease and determinants of the genetic contributions to antihypertensive drug responses in essential hypertension.
